

DOUBLE PANE & INTERIOR FILM OPTIONS

These are our most popular interior films with different traits so you can find the best suite of traits for your needs. What do you prioritize from your window film? Each film will provide slightly different aesthetics both looking in and out. There is a lot of information, we are always happy to help!

Looking Out

Picking the Right One

We found 4 traits that matter most to Edmontonians!

- Light** - how much light comes through.
- Heat** - TSE (Solar Energy) rejected
- Glare** - the glare reduction it provides
- Ext. Reflect** - light reflected outside

In the table below best is Green, Yellow is middle of the pack, Red is trailing the other options.

Looking In

Day vs Night Privacy

Exterior reflectivity is a great gauge of daytime privacy.

At night, if it is brighter inside, you may not have the same privacy from the film.

Frosted film is great for day & night privacy (or blinds for night).

All provide ~99% UV Protection, it's how they stay clear!

Interior Film Traits

	Light	Heat	Glare	Ext. Reflect
Ultra View 35	34%	45%	58%	13%
Ultra View 25	25%	65%	70%	27%
SYDS 15	15%	82%	89%	63%

Lifetime Warranty On Interior Applied Films

We offer a Lifetime Warranty on interior applied film. 30+ years ago we offered a lifetime warranty to match the window. That warrantee remains in place today. What does lifetime mean? Our film will last the lifetime of the window. With proper care and maintenance, you can expect your film to last 30 years or more. Ask your installer for more information on caring for your film.
